

Project Development Phase Model Performance Test

Date	17 July 2025
Team ID	LTVIP2025TMID42791
Project Name	GrainPalette - A Deep Learning Odyssey In Rice Type Classification Through Transfer Learning
Maximum Marks	10 Marks

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Metrics	Regression Model: MAE - , MSE - , RMSE - , R2 score - Classification Model: Confusion Matrix - , Accuray Score- & Classification Report -	 The Confusion Matrix shows the performance of the classification model. The axes are labeled with the true classes: Basmati, Sona Masoori, and Brown Rice. The diagonal elements represent correct classifications: 3 for Basmati, 3 for Sona Masoori, and 2 for Brown Rice. The off-diagonal elements represent misclassifications: 0 for Basmati to Sona Masoori, 0 for Sona Masoori to Basmati, 1 for Basmati to Brown Rice, 0 for Sona Masoori to Brown Rice, 0 for Brown Rice to Basmati, and 0 for Brown Rice to Sona Masoori.
2.	Tune the Model	Hyperparameter Tuning - Validation Method -	 The figure contains two line plots. The left plot, titled 'Model Accuracy', shows Training Accuracy (blue line) and Validation Accuracy (orange line) over 12 epochs. Training accuracy increases from 0.65 to 0.95, while validation accuracy increases from 0.65 to 0.90. The right plot, titled 'Model Loss', shows Training Loss (blue line) and Validation Loss (orange line) over 12 epochs. Training loss decreases from 0.8 to 0.1, while validation loss decreases from 0.8 to 0.1.
